BENCH AMBURGO WITH BACKREST

AP036S

Finitura /Finishing

GALVANIZED AND PAINTED

Bench Amburgo with backrest has a structure in galvanized and powder coated steel, composed by two supports in laser-cut steel sheet 8 mm thick, on which are welded drilled base plates for the fixing at the ground with bolts.

The seat is made of timber slats, which are fixed to the structure through screws to specific metal plates.

The wooden parts of the bench (seat and backrest) are made in natural pine wood impregnated in autoclave according with DIN 68800-3 in order to avoid the natural wooden cracks and any risks of splintering. On request the wooden slats can be supplied in hardwood. A central steel reinforcement is fixed to the seat and to the backrest, in order to give greater stability and linearity to the slats.

All metal parts are galvanized and powder coated in different RAL colours.

All screws are in stainless steel.
